EDUCATION

University of Washington, Seattle, WA

Entering Fall 2026

Degree: MS in Biostatistics

Expected Graduation Date: March 2028

California Polytechnic State University, San Luis Obispo, CA

Degree: BS in Mathematics

GPA: 3.955 (Summa Cum Laude)

Awards: Two-Time Edward Van Dyne Memorial Scholarship Winner, One-Time Lawrence and Ruth Renihan Scholarship Winner - Awarded by the Cal Poly Math Department based on academic merit and professor recommendations.

Graduation Date: March 2026

WORK EXPERIENCE

Woods Hole Oceanographic Institution, *Summer Student Fellow*, Woods Hole, MA

May 2025 - August 2025

11 week REU internship modeling phytoplankton size distributions by creating matrix projection models, analyzing atmospheric data, and coding in R under the guidance of Dr. Michael Neubert. Final work was presented in a written report and poster presentation, and oral presentations/discussions with focus groups were given throughout.

University of Notre Dame Environmental Research Center, *Student Intern*, South Bend, IN

June 2024 - August 2024

LiDAR-Based Mapping of Watersheds and the Parameterization of a Hydrological Model in a North Temperate Mixed Deciduous Forest in R. Analyzed large amounts of atmospheric forcing data to model lake water budgets under the guidance of Dr. Nathan Swenson and Dr. Stuart Jones. Final work was presented in an oral report.

Cyberinfrastructure Center of Excellence (NSF), *Student Fellow*

January 2024 - April 2024

10 week student fellowship program focused on learning about cyber infrastructure and the data lifecycle at NSF Major Facilities. Trained in scientific computing, data workflows, and FAIR data. The fellowship concluded in a group project presented to other students and staff.

California Polytechnic State University, *ISA Grader*, San Luis Obispo, CA

January 2024 - March 2025

Grading students work for proof-based linear algebra classes and linear analysis classes.

ADDITIONAL PROJECTS

Cal Poly Senior Project

September 2025 - March 2026

A two quarter long project where I implemented a mathematical framework to model inner shelf hypoxia driven by upwelling and phytoplankton density under the guidance of Dr. Paul Choboter. Analysis of the non-spatial time dependent ODE model, and the space and time dependent PDE model was conducted in MATLAB. A final written report was submitted to the Cal Poly math department.

SKILLS AND INTERESTS

- *Computer Skills:* R, Python, MATLAB, HTML
- *Interests:* In my free time I enjoy hiking, swimming, painting, and spending as much time outdoors as I can.
